I'm not robot!

Proof. Let B and C be inverses of A. Then $AB = I_n = BA$ and $AC = I_n = CA$. Then $B(AC) = BI_n = B$ and $(BA)C = I_nC = C$. Hence because $B(AC) = (BA)C$, we deduce that $B = C$.

REMARK 2.5.1 If A has an inverse, it is denoted by A^{-1}. So

$$AA^{-1} = I_n = A^{-1}A.$$

Also if A is non–singular, it follows that A^{-1} is also non–singular and

$$(A^{-1})^{-1} = A.$$

THEOREM 2.5.2 If A and B are non–singular matrices of the same size, then so is AB. Moreover

$$(AB)^{-1} = B^{-1}A^{-1}.$$

Proof.

$$(AB)(B^{-1}A^{-1}) = A(BB^{-1})A^{-1} = AI_nA^{-1} = AA^{-1} = I_n.$$

Similarly

$$(B^{-1}A^{-1})(AB) = I_n.$$

REMARK 2.5.2 The above result generalizes to a product of m non–singular matrices: If $A_1, \ldots, A_m$ are non–singular $n \times n$ matrices, then the product $A_1 \ldots A_m$ is also non–singular. Moreover

$$(A_1 \ldots A_m)^{-1} = A_m^{-1} \ldots A_1^{-1}.$$

(Thus the inverse of the product equals the product of the inverses *in the reverse order*.)

EXAMPLE 2.5.1 If A and B are $n \times n$ matrices satisfying $A^2 = B^2 = (AB)^2 = I_n$, prove that $AB = BA$.

Solution. Assume $A^2 = B^2 = (AB)^2 = I_n$. Then A, B, AB are non–singular and $A^{-1} = A$, $B^{-1} = B$, $(AB)^{-1} = AB$.

But $(AB)^{-1} = B^{-1}A^{-1}$ and hence $AB = BA$.

EXAMPLE 2.5.2 $A = \begin{bmatrix} 1 & 2 \\ 4 & 8 \end{bmatrix}$ is singular. For suppose $B = \begin{bmatrix} a & b \\ c & d \end{bmatrix}$ is an inverse of A. Then the equation $AB = I_2$ gives

$$\begin{bmatrix} 1 & 2 \\ 4 & 8 \end{bmatrix} \begin{bmatrix} a & b \\ c & d \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$
